

Tooth coloured braces

Tooth coloured, aesthetic braces are the clear alternative to conventional metal braces. Fitted to the outside surface of the teeth, an attractive translucent appearance and comfortable design gives you all the self-confidence you need to face each day with a smile.

So what is there to think about?

call today and get a step closer to the smile you've always dreamed of.

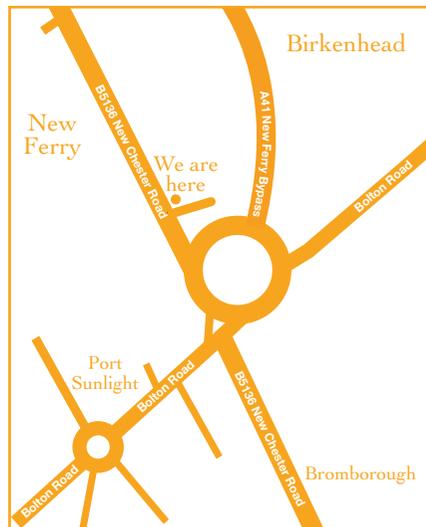

Benefits of private care

- There is no age limit to having an attractive smile. Adults can be treated as well as children
- A wider choice of treatments are available including braces that are virtually invisible
- All problems can be treated, including those not covered by the NHS
- No waiting lists
- Affordable payment plans to spread the cost of your treatment; with 0% credit available, no deposit required and the option to spread your payments over as much as 5 years*.

Here at Sunlight Orthodontics, we have a range of the most modern techniques available for you to choose...

Radiant smiles

It's easier than you'd think to achieve the smile you've always dreamed of!

Many adults are discovering to their delight, that you are never too old for simple and affordable orthodontic procedures to have a positive effect on your life.

A perfect smile brings a self-confidence and self-belief, which can enhance both your work and social life, opening up a world of possibilities.

Here at Sunlight Orthodontics our wealth of knowledge and experience along with the use of the latest techniques, including braces that are virtually invisible, means that a beautiful smile is within your reach.

Come and meet us

Our dedicated team is on hand to advise on the best options available to you and carry out your treatment in a relaxed and informative environment. Simply contact us by telephone or e-mail and we can arrange an appointment for an initial assessment at your convenience. As a private patient you do not need to wait for your dentist to refer you. We will keep both you and your dentist fully informed about your treatment.

Your first visit

At your first visit, your treatment co-ordinator will provide you with a brief medical questionnaire to complete. We will then listen to you carefully to discover what you want to achieve for your new smile. Following this, the orthodontist will examine your facial profile, mouth and teeth. This usually involves taking simple measurements and is completely painless. Any necessary records (such as x-rays) are often taken at this visit so that we can then discuss with you the various options available to correct your smile.

Invisalign

Invisalign is the clinically proven, virtually invisible way to achieve straight teeth without metal or wires. Through a series of clear, removable aligners, crafted especially for you, Invisalign progressively works to correct crooked or over-crowded teeth. Hundreds of thousands of people have already benefited from the Invisalign treatment.

Lingual braces

Lingual braces fit on the inner side of the teeth. This allows your teeth to be straightened without the need for visible braces. Lingual braces are suitable for use in cases where the stigma of being seen to wear a brace has left you reluctant to seek the smile you have always dreamed of.
